

Medium Questions

1. *"Can you show me our top 5 product categories by revenue, and for each one, what percentage of that revenue came from items bought with a discount?"*
 2. *"Which 5 states bring in the highest revenue? For each, also tell me the average order value and the percentage of purchases made by subscribers."*
 3. *"I want to compare our highest-spending age group against our lowest-spending one. Give me their average purchase amount and average review rating – just those two groups."*
 4. *"Rank our shipping methods by how much revenue they generate per order. Show me the top 5 and their total revenue."*
 5. *"What's the repeat purchase rate (customers who bought more than once) for subscribers versus non-subscribers? Just the two numbers."*
-

Difficult Questions

1. *"Which three pairs of products are most often bought together by the same customer? Just list the pairs and how many customers bought both."*
 2. *"We group customers into New (0-1 past purchases), Returning (2-5), and Loyal (6+). For each group, calculate an estimated lifetime value using average spend times past purchases. Then tell me which segment has the highest value and which has the lowest – only those two."*
 3. *"Find the single product that makes the most total revenue but has an average rating below our company average. Show its name, revenue, and rating."*
 4. *"Look at our top revenue-generating product category. For that category, which season has the highest average purchase amount, and which season has the lowest? Just those two seasons."*
 5. *"Give me the top 5 customers by estimated yearly spend. Use their average transaction value multiplied by (365 divided by how often they buy in days). Also show their age group and subscription status."*
-

Extra Difficult Questions

1. *"Split customers into five equal groups by total spend (top 20%, next 20%, etc.). For the highest-spending group, tell me their most common payment method and what percentage of their purchases used a discount."*
2. *"For each age group, calculate the share of revenue coming from subscribers. Then show me the age group where subscribers contribute the highest percentage of that group's total revenue – only that age group and the percentage."*
3. *"Compare discounted versus non-discounted purchases across product categories. Find the category where the difference in average review rating is biggest (either higher or lower). Show the category, the rating difference, and whether discounted or non-discounted rates higher."*

4. *"Imagine we convert every non-subscriber who has made more than 10 past purchases into a subscriber. How much additional revenue would that bring? Use the current average spend of subscribers as the expected spend per converted customer."*
5. *"Compare two types of customers: those who've bought from at least three different product categories, and those who buy from only one category. For each type, give me their most common subscription status and their average total spend. Just two rows."*
